

**I. IN THE SPECIFICATION**

**A. Correction of Errors**

5. The words “sonogram” and “of” were misspelled.

6. Please correct the paragraph starting on page 1, line 17 as marked below:

Given the benefits of ultrasounds, sonograms and echocardiograms these tools are in widespread use in many hospitals, clinics, testing facilities, and individual doctors' offices. Many doctors primarily base their diagnosis on the results from ultrasounds, sonograms and echocardiograms. While these tools allow doctors to make their diagnosis without costly, risky, and time consuming exploratory surgeries, an error in administering an ultrasound, sonogram and echocardiogram can lead to a wrong diagnosis. A wrong diagnosis can be catastrophic for the patient. By receiving an incorrect diagnosis, the patient can potentially fail to receive needed medical treatment and/or be unnecessarily treated. Whether needed medical treatment is withheld or unnecessary medical treatment is given due to an erroneous test result from an ultrasound, ~~sonogram~~ sonogram and echocardiogram, the patient unnecessarily suffers.

7. Please correct the paragraph starting on page 3, line 9 as marked below:

In another prior system, frames of the movie are sent interactively as the movie was recorded. This has the disadvantage ~~of~~ requiring the movie to be transmitted in the format in which it was recorded. This format may not be suitable for efficient transmission. This system also has the disadvantage that the movie is not stored at the display device 10 and must be re-transmitted for each viewing.
